# Linux Bash History and Command-Line Shortcuts Lab

Tricks for the bash command line

**Viewing History**

1. Look at all the commands you have typed so far

```
history
```

2. Ok that could be a lot, look at the last 20| tail -20

```
history | tail -20
```

**History Expansion with !**

3. run the last command

```
!!
```

4. Run the last command that started with grep

```
!grep
```

5. What does does this command do?

```
!42
```

6. run the most recent command that has the word tail in it

**Quick Replacement with ^**

7. Look at your success.txt file and then use the ^ to replace success with fail in the previous command

```
cat success.txt
^success^fail
```

**Reverse Search (Ctrl+R)**

8. Use ctrl+R to find the grep command you used to get all the successful log in attempts from the honey pot. Ie: press Ctrl+r then type grep and continue pressing Ctrl+r to cycle matches.

**Re-run Last Argument**

9. You can use !$ to just get an argument from the previous command. For example after you ran the grep command you can safe that regex by typing

```
echo !$ > savedregex.txt
```

**Mess around with $**

- **$0**
- **$1**
- **$$**
- **$#**

**Some other useful Bash Shortcuts**

Improve command-line efficiency.

Ctrl+A  # start of line
Ctrl+E  # end of line
Ctrl+U  # delete to start
Ctrl+K  # delete to end
Ctrl+L  # clear screen
Ctrl+W  # delete previous word
